

4N6 Introduces New Laser Scanning Training Courses For Forensic Investigations for 2008

Laser scanning is revolutionising crime scene investigations

In 2008 4N6 together with its partners is launching a series of laser scanning courses for:

Road Traffic Accidents (1 week)
Crime Scenes, including BPA, bullet analysis and indoor scanning (1 week)

Laser scanning makes it possible to collect data at a crime scene or an accident within minutes. So the scene can be digitally "frozen" and documented and then processed afterwards.

Attendees will learn :

- Laser scanning basics
- Scanning technology including the latest hand held, wireless and long range devices
- Forensic scanning methodology
- Analysis using specialist applications including: Delft Forensic BPA and crime scene analysis software
- Mock scenes
- Camera techniques for laser scanning

Course fees include:

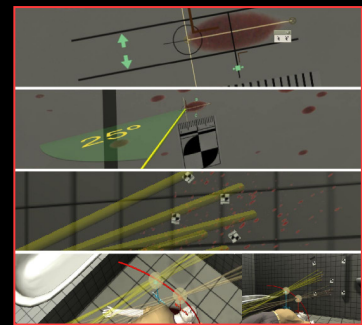

- Accommodation
- Course Certificate
